

# ANATOMY LAB LIVE | CONTAGION 2020

Anatomy Lab LIVE is returning for 2020 and this time we are offering guests the chance to apply their cutting-edge research at the forefront of disease control. The nationally acclaimed dinner and dissection experience attracted headlines around the world and after three amazing sell out tours we're back for 2020, bigger and better than before!

Those quick enough to grab tickets will step into our dining room that has been converted into the U.K. Home Office Contagion Protection Facility (CPF). Guests will enjoy their meal in a fully working quarantine and decontamination centre. In the centre of the room will be a quarantine tank, inside it, a highly infected human specimen.

Following your two-course meal, the secure hatch will open where you will begin clinical trials. You and your team will take part in real life experimental methods before dissecting inner organs to identify the bacteria pathogen.

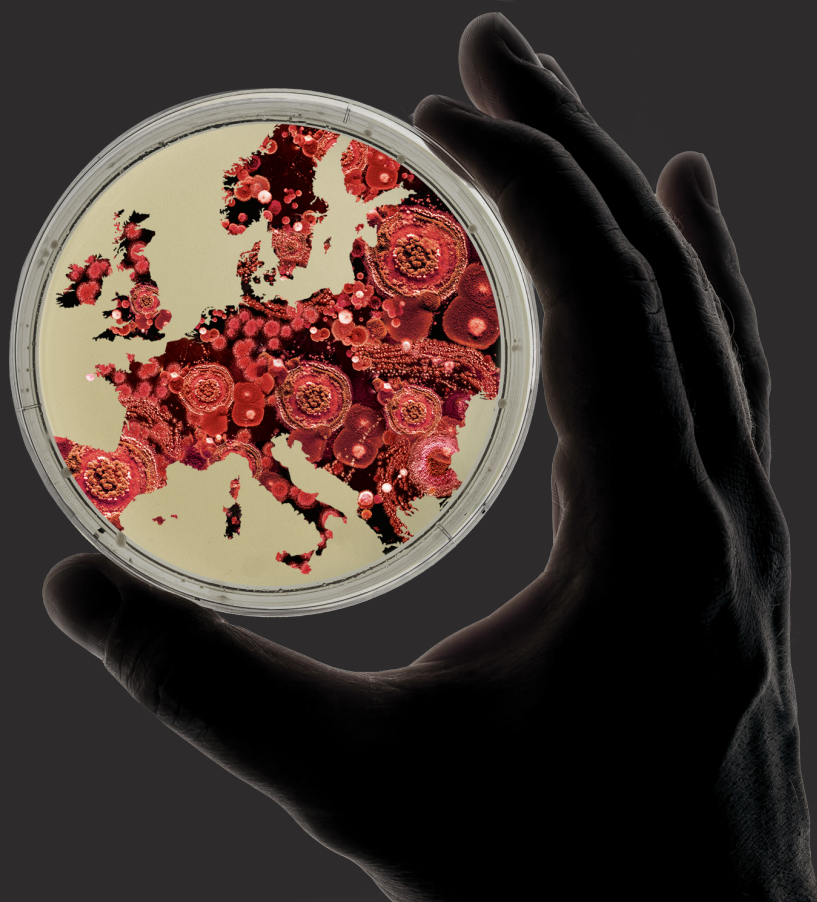

Featured on Dragons Den in 2018, Sam Piri, CEO of ITAE Group said, "2020 will see guests develop an in-depth understanding of infectious diseases both in the community and the clinical setting. I am so excited about this concept as exploring the impact and extent of global pandemics, climate change and an anti-biotic resistant world feels so current and topical at the moment." Aimed at students, graduates and those with a macabre apocalyptic interest, this event will expose all you need to know about infection control and how to stay healthy.

Dean Thomas-Lowde, Director for Growth and Development said, "this is set to be a ground-breaking experience throwing light on real lab based clinical trials coupled with a complete human body dissection and already early bird sales are strong"

All tickets include full PPE, equipment to participate and our famous two course meal. With the antibiotic era ending, join us for a sensational evening of dinner, dissection and infection in 2020.

## Who can attend?

The event delivers in-depth content aimed at those studying anatomy, physiology or pathology at undergraduate level and for those who are already practicing healthcare professionals. The event is also a great experience for any person who is interested in the human body, disease or medicine on the whole. The wider general public are also encourage to attend.

How do I get a ticket?
